

**RIDUTTORI ORTOGONALI COPPIA IPOIDE CHO
CHO HELICAL-HYPOID GEAR UNITS**

PREMESSA

I riduttori ortogonali a coppia ipoide serie CHO nascono per essere utilizzati al posto dei riduttori a vite senza fine nelle applicazioni che richiedono elevati rendimenti, specialmente con alti rapporti di riduzione, sono ad essi intercambiabili come fissaggi e garantiscono basse temperature di funzionamento.
Grazie alla predisposizione per motore con campana e giunto, possono essere collegati a motori normali, autofrenanti ed antideflagranti.
Questo tipo di riduttore trova vasto impiego dove è richiesto risparmio energetico e con motori comandati da inverter.

CARATTERISTICHE PRODOTTO

- Alto rendimento
- Bassa rumorosità
- Bassa temperatura
- Montaggio universale
- Cassa in alluminio verniciato grigio RAL 9022

I riduttori serie CHO sono prodotti in 4 grandezze. Potenze 0,12-4 Kw; Rapporti da 7,5 a 300. Coppia max 130-500 Nm.

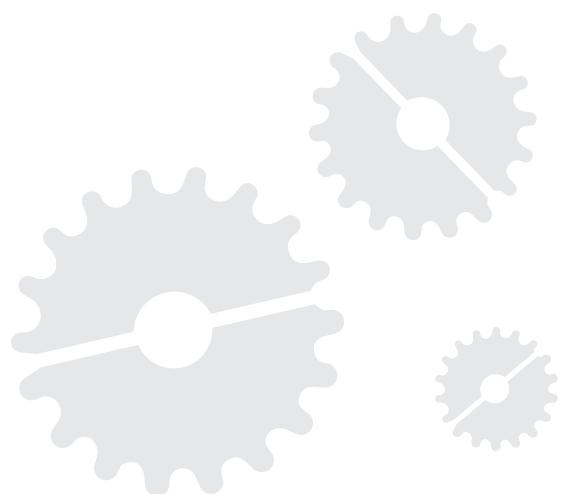

INTRODUCTION

CHO helical hypoid gear units have been conceived to be used instead of worm gearboxes where high efficiency is requested, especially with high ratios, they are interchangeable and guarantee low exercise temperature. They can be connected, through a coupling to standard motors, brake motors and explosion-proof motors. This kind of gearboxes are widely used where energy saving is requested and with electric motors driven by inverters.

PRODUCT FEATURES

- High efficiency
- Low noise
- Low temperature
- Universal mounting
- Aluminum housing, grey RAL 9022 painted

CHO gearboxes are manufactured in 4 sizes. Power 0.12-4KW; Ratio 7,5-300; Torque max 130-500 Nm.

INFORMAZIONI GENERALI - GENERAL INFORMATION

POTENZA P - POWER P

$$P_1 * \eta = P_2$$

P_1 = Potenza entrata · *Input power*

P_2 = Potenza uscita · *Output power*

η = Rendimento · *Transmission efficiency*

VELOCITA' DI ROTAZIONE n - ROTATION SPEED n

n_1 = Velocità entrata · *Input speed*

n_2 = Velocità uscita · *Output speed*

Al fine di ottimizzare le condizioni di lavoro e prolungare la durata del riduttore si consiglia una velocità di entrata ≤ 1400 rpm

Sono ammesse velocità superiori in accordo alla sottostante tabella.

An output speed ≤ 1400 rpm is suggested so as to optimize the working condition and extend the service life. Input speed higher are allowed following the table below.

n. RPM	POTENZA - POWER
1400	Kw
2000	Kw * 1,35
2800	Kw * 1,8

RAPPORTO DI TRASMISSIONE i - TRANSMISSION RATIO i

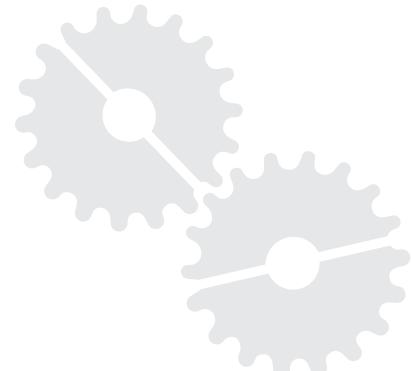

$$i = \frac{n_1}{n_2}$$

COPPIA M - TORQUE M

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \quad [\text{Nm}]$$

$$M_2 \geq M_{2n} \cdot f_s \quad [\text{Nm}]$$

M₂ = Coppia uscita *Output torque*
M_{2n} = Coppia nominale uscita *Rated output torque*
P₁ = Potenza entrata *Input power*
η = Rendimento *Transmission efficiency*
f_s = Fattore di servizio *Service factor*

CARICHI RADIALI F_R - RADIAL LOADS F_R

Il carico radiale è proporzionale alla coppia richiesta ed inversamente proporzionale al diametro dell'elemento di trasmissione secondo la sottostante formula.

The radial loads is proportional to the requested torque and inversely proportional to the transmission member diameter following this formula.

$$F_R = \frac{2000 \cdot T \cdot T.e.f.}{D} [N]$$

F_R	= Carico radiale
T	= Nm (Coppia)
T.e.f.	= Fattore elemento di trasmissione
T.e.f.	= 1,15 ingranaggio
	= 1,4 pignone per catena
	= 1,75 puleggia a gola
	= 2,5 puleggia piana
D	= Diametro elemento di trasmissione

<i>Radial load</i>
<i>Nm (Torque)</i>
<i>Transmission element factor</i>
<i>1,15 gear</i>
<i>1,4 chain spocket</i>
<i>1,75 v-pulley</i>
<i>2,5 flat-pulley</i>
<i>Transmission element diameter</i>

Quando il carico radiale non è applicato sulla mezzeria dell'albero bisogna usare la sottostante formula.

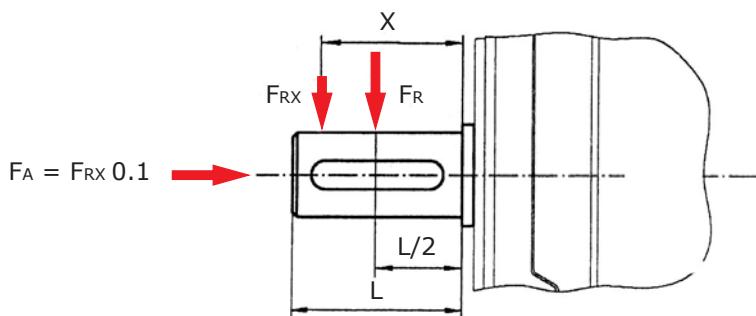

When the radial loads is not applied on the centre line of the shaft it is necessary to use the following formula.

$$F_{Rx} \leq \frac{F_R \cdot a}{(b+x)} [N]$$

F_R	= Carico radiale mezzeria
a,b,x	= vedi tabella

<i>Radial load on the centre line</i>
<i>See table</i>

QUANTITA' OLIO · LUBRICANT FILL QUANTITY

Le quantità indicate sono quelle raccomandate. Il valore preciso dipende dal numero degli stadi e dal rapporto di riduzione. La tabella che segue indica i quantitativi in funzione della posizione di montaggio (B3, B6, B7...)

The specified fill quantities are recommended values. The precise values vary depending on the number of stages and gear ratio. The following tables show guide values for lubricant fill quantities in relation to the mounting position (B3, B6, B7...)

grandezza size	quantità olio in litri · fill quantity in liters

I riduttori CHO vengono forniti completi di olio minerale per posizione di montaggio B3.

La precoppia usata per il terzo stadio è lubrificata con olio sintetico e non necessita di tappo di sfiato.

CHO gearboxes are supplied complete with mineral oil for mounting position B3.

The pre-stage used for third stage is lubricated with syntetic oil and it does not need the breather plug.

MANUTENZIONE - MAINTENANCE

1 Per questi riduttori il primo cambio di olio deve essere effettuato dopo circa 300 ore (periodo di rodaggio). Non mischiare mai olio sintetico con olio minerale.

For gear units, first oil change should be after about 300 hour (run-in period). Never mix the synthetic oil and mineral oil together.

2 Ogni 3000 ore di lavoro e almeno ogni 6 mesi, verificare olio e livelli, anche le tenute per eventuali perdite. Per i gruppi previsti di attacco PAM controllare l'elastomero ed eventualmente sostituirlo.

Every 3000 working time, at least every 6 months, you have to check the oil and oil level, the seals visually for leakage. For IEC input gear units, the elastomer should be tested or replaced if necessary.

3 In funzione del tipo di lavoro, al massimo ogni 2 anni è necessaria una revisione. Sostituire l'olio minerale e ripristinare il grasso sui cuscinetti.

Depending on the operating conditions every 3 years at the latest for inspection is needed. Then change the mineral oil and replace the bearing grease.

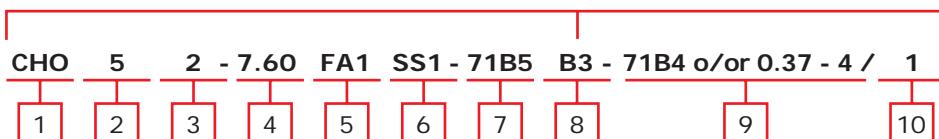

4 In funzione del tipo di lavoro, dove necessario, sostituire gli anelli di tenuta.

Depending on the operating conditions, change the oil seals.

DESIGNAZIONE - DESIGNATION

SS2

Posizione morsetteria

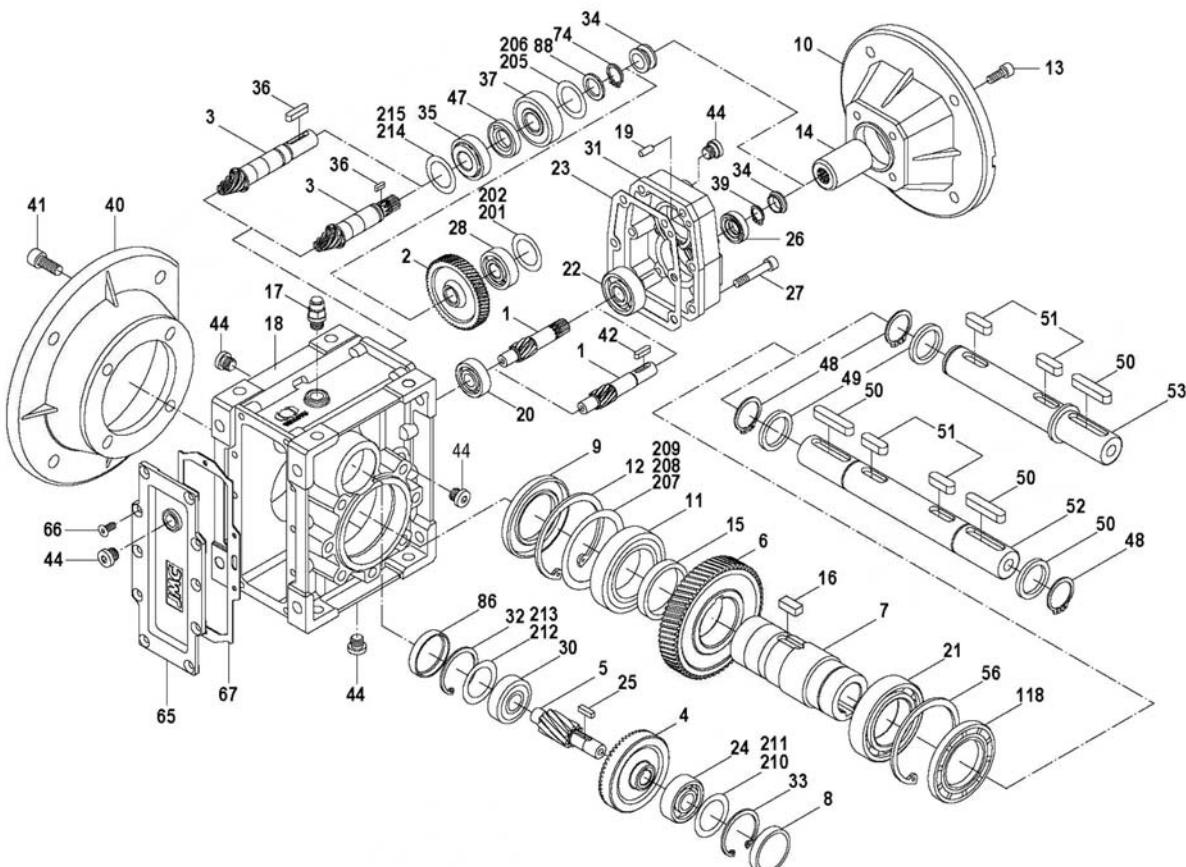

Position of terminal box

Specificare posizione di montaggio della morsetteria.

In the case of specific requirements, when ordering, specify the position of the terminal box as shown in the diagram.

ESPLOSO E PARTI DI RICAMBIO EXPLODED DRAWING AND SPARE PARTS LIST

INSTALLAZIONE

- I dati riportati sulla targhetta identificativa devono corrispondere al riduttore ordinato.
- Il livello dell'olio dovrà corrispondere alla quantità prevista per la posizione di montaggio richiesta (vedi catalogo).
- Il fissaggio del riduttore deve avvenire su superfici piane e sufficientemente rigide in modo da evitare qualsiasi vibrazione.
- Il riduttore e l'asse della macchina da movimentare devono essere in perfetto allineamento.
- In caso si prevedano urti, sovraccarichi o blocchi della macchina il cliente dovrà provvedere all'installazione di limitatori, giunti, salvamotori etc.
- Gli accoppiamenti con pignoni, giunti, pulegge ed altri organi devono essere fatti previa pulizia delle parti ed evitando urti nel montaggio poiché questo potrebbe danneggiare i cuscinetti ed altre parti interne.
- Nel caso il motore sia di fornitura del cliente questi dovrà accertarsi che le tolleranze di flangia ed albero corrispondano ad una classe "normale", i nostri motori rispondono a questa esigenza.
- Verificare che le viti di fissaggio del riduttore e dei relativi accessori siano correttamente serrate.
- Adottare gli opportuni accorgimenti per proteggere i gruppi da eventuali agenti atmosferici aggressivi.
- Dove previsto proteggere le parti rotanti da possibili contatti con gli operatori.
- Nel caso i riduttori vengano verniciati proteggere gli anelli di tenuta ed i piani lavorati.
- Tutti i riduttori sono verniciati colore grigio RAL 9022.

FUNZIONAMENTO E RODAGGIO

- Per ottenere le migliori prestazioni è necessario provvedere ad un adeguato rodaggio dei riduttori incrementando la potenza gradualmente nelle prime ore di funzionamento, in questa fase un aumento delle temperature è da considerarsi nella norma.
- In caso di funzionamento difettoso, rumorosità, perdite olio etc. arrestare immediatamente il riduttore e, dove possibile, rimuovere la causa, in alternativa inviare il pezzo alla nostra sede per i controlli.

MANUTENZIONE

- I riduttori ad ingranaggi sono lubrificati con olio minerale, evitare di miscelare olii sintetici. Controllare periodicamente il livello del lubrificante.

CONSERVAZIONE A MAGAZZINO

- Nel caso di lunga conservazione a magazzino, superiore a tre mesi, si consiglia di proteggere alberi e piani lavoratori con antiossidanti e di ingrassare gli anelli di tenuta.

MOVIMENTAZIONE

- Nella movimentazione dei gruppi dovrà essere posta molta attenzione a non danneggiare gli anelli di tenuta ed i piani lavorati.

SMALTIMENTO IMBALLI

- Gli imballi in cui vengono consegnati i nostri riduttori andranno avviati, dove possibile, al riciclo degli stessi tramite le ditte preposte.

INSTALLATION

- The data shown on the identification name plate must correspond to the gearbox ordered.
- The oil level must correspond to the quantity foreseen for the assembly position requested (see catalogue).
- All of the other gearboxes are supplied complete with permanent synthetic oil in a quantity that is sufficient for any assembly position.
- The gearbox must be fixed on a flat surface that is sufficiently rigid in order to avoid any vibration.
- The gearbox and the axis of the machine to be driven must be perfectly aligned or in the event that knocks, overloading or blockage of the machine are foreseen, the client must install a limiting device, joints, overload cut-out etc.
- Coupling with pinions, joints, pulleys and other parts must be done after the parts have been cleaned and knocks should be avoided while assembling as they could damage the bearings and other internal parts.
- In the event that the motor is supplied by the client, he must check that the flange and shaft tolerances correspond to a "normal" class; our motors satisfy this requirement.
- Check that the fixing screws for the gear and the related accessories are correctly tightened.
- Take suitable measures to protect the groups from any aggressive atmospheric agents.
- Where foreseen, protect rotating parts from any possible contact with the operators.
- If the gears are painted, protect the oil seals and the machined surfaces gearboxes.
- All of the gears are painted RAL 9022 grey.

OPERATION AND RUNNING-IN

- To obtain the best performance the gearboxes must first be run-in by gradually increasing the power in the first few hours of operation, in this phase an increase in temperature is considered normal.
- In the event of defective operation, noise, oil leakage, etc. stop the gear immediately and, when possible, remove the cause. Alternatively, send the piece to our factory to be controlled.

MAINTENANCE

- The helical gearboxes are lubricated with mineral oil do not mix with synthetic oil. Check oil level regularly.

WAREHOUSE STORAGE

- If the warehouse storage will be for a long time, more than 3 months, the shafts and machined surfaces should be protected using antioxidants and the oil seals should be greased.

HANDLING

- Care must be taken not to damage the oil seals and the machined surfaces when handling the groups.

DISPOSAL OF PACKAGING

- The packaging in which our gears are delivered should be sent to specialised companies for recycling if possible.
